

# EIDorado Control™

Dynamic workflow management  
for donor centers, transfusion  
services and hospitals

Flexible workflow management for: Quality control, inventory,  
staff resources, documentation, cost analysis

## SOFTWARE SOLUTIONS

# Managing mission critical functions at more than 500 healthcare sites worldwide

First introduced in 1995 as Sapa, EIDorado Control™ applications are continuously evolving to meet the changing needs of our customers. EIDorado Control software is a completely stand-alone system designed with dynamic administrative functionality to complement any existing healthcare management system. Its well-designed screens are intuitive and its functions are adaptable to any environment.

## Compliance management

Track potential risks, reasons and cause analysis identified within your organization. Create action plans which provide analysis of the causes, implementation and monitoring of preventative, corrective or enhancement actions, and verification of the efficiency of actions carried out. Present compliance data as statistical analysis or graphical data and calendar all aspects of the follow-up activities to ensure proper attention by your staff.

## Personnel and organization management

- Personnel and organizational structure: Optimize your organization by providing organizational chart capabilities that help to properly assess staff for the appropriate position given their education and degrees. Evaluate and track staff training requests and professional requirements.
- Equipment and tasks scheduling: Manage proposed schedules and the execution of tasks (equipment and facilities maintenance, backup, internal audits, periodic meetings, management reviews, education, evaluations, etc.) for equipment and personnel.

## Quality control management

Schedule and maintain quality control results. Receive a consolidated view of all the daily laboratory controls, allowing staff to access essential information.

## Financial analysis

Determine unit cost financial information with this powerful analytical tool. Create a distribution model for charges related to an activity such as performing a test or preparing a blood product including labor, disposables, raw materials, etc. Model the charge distributions into activity types (technical, service, or administrative) and integrate for a unit cost calculation. Easily export this information for viability studies and budgeting for your organization's quality system by reporting quality to cost ratios and other quality data.

Our team embraces a company-wide Service 360® commitment to provide you with well-developed products, comprehensive education and professional resources, to enable you to utilize your products to their fullest. Our customer support analysts are always available to serve you.

## Document management

With this indispensable tool, trace and update the version history of a document, control appropriate content reading and provide employees with a tool to research and consult the documents in the database. No more keeping track on spreadsheets; control and track the specific users required to read a document.

## Inventory management

Inventory Management controls the tracking of all supplies including lot-based materials. Control the state of your stock in real time using the Inventory module's alert system for inventory shortage and expired products.

## Access management

Secure permission to view or edit sensitive data within ElDorado Control applications. Allocate a specific user profile to each staff member and allow personalized access to modules within the software, ensuring that staff members access only the screens that they are authorized to view.

## Dynamic workflow systems help manage:

- Quality control
- Personnel and organization
- User profiles and access
- Inventory and supply orders
- Document versioning
- Financial and unit cost calculations

## Dashboard with alerts featuring:

- Individual user mailbox
- Personalized control panel
- Work log of documents to review
- Task list
- Quality system compliance
