

STATEMENT

Latex Content in Haemonetics Products

August 22, 2014

To whom it may concern,

Please accept Haemonetics' assurance that the disposable medical devices produced in the company's facilities do not employ latex in their composition or manufacture, and are manufactured in facilities where Latex is not employed for other purposes.

Accordingly, there is no associated risk of allergenic reactions to latex for the donor, the patient or the operator from Haemonetics' products.

Haemonetics has always had a strong commitment to customer safety and will continue to strive to ensure the safety of all its products, every day.

For additional questions or comments about our products, please visit our website or contact your Haemonetics representative.

Best regards,

Andrew Sette

Sr. Director QA/RA Europe and Distribution
