

EdgeCell™

Intuitive software for
cellular therapy and tissue
banking management

SOFTWARE SOLUTIONS

Intuitive software for cellular therapy and tissue banking management

The EdgeCell advantage

- A software application **designed for** cell and tissue banks, providing security, efficiency and traceability
- A cell and tissue **storage management** module that enables you to track product and location history, in a secured database
- **User configurable processes** which provide the flexibility to adapt the system to meet your internal processes and procedures
- Configurable product release rules based on the **type of procurement**
- Industry standard database which provides easy information retrieval for report generation
- A **proven solution** based on a platform used by thousands of users

Main features

- User definable procurement types (cells, blood cords, hematopoietic cells, bone marrow, bones, valves, corneas, skin, etc.)
- Patient/donor protocol management
- Procurement Kits management & Receipt of Procurements from external sources
- Configurable Medical Questionnaire
- Automatic Deferral Posting based on medical history and tests
- Configurable calculation for tests
- ISBT 128 management
- Product manufacturing and labeling
- Record of all supply items during manufacturing
- Bio-repository (cell and tissue storage management) with product location tracking history
- Product distribution and confirmation of infusion
- Adverse event and post-infusion tracking
- Full product and process traceability
- Regulatory documents printout

EdgeCell technical platform

- MS Windows or Citrix/TSE – Oracle RDBMS
- Centralized deployment and upgrade administration
- Database model provided and documented

EdgeCell highlights

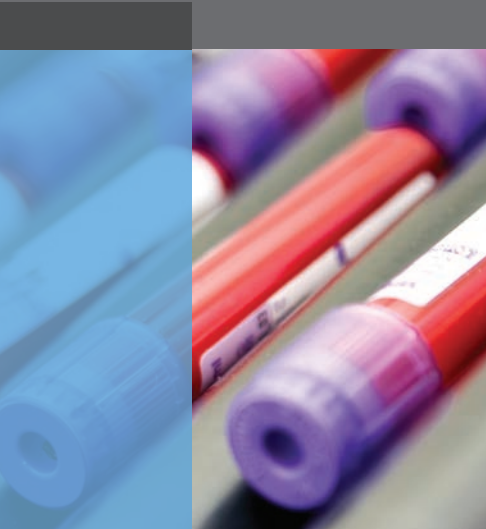

- User definable procurement types (cells, blood cords, hematopoietic cells, bone marrow, bones, valves, corneas, skin, etc.)
- Configurable medical questionnaire automatic deferral posting
- Configurable calculation for tests
- ISBT 128 management
- Product manufacturing and labeling
- Record of all supply items during manufacturing
- Bio-repository (cell and tissue storage management) with product location tracking history
- Product distribution and confirmation of infusion
- Adverse event and post-infusion tracking
- Full product and process traceability
- Regulatory documents printout
